Re: Report of Survey for the establishment of a new Weather Station on Uterik

Date: May 3, 1957

On 17 April 1957, while making a survey of the existing Radsafe station on Uterik, it was noted that the village extended much farther north of the station than south of it.

Approximately 500 feet south of the existing Radsafe station an area 523 feet long extending 320 feet in from the lagoon could be utilized for the proposed new Weather station.
