Dear Gene:

I have your letter about the early publication of the field work. Apparently there is some confusion in all of our minds on the subject. Accordingly, I would like to make the following proposal, and if this is acceptable to you and Chuck, the necessary plans can be made.

If at all possible to complete the report and obtain permission for an open presentation of the clinical portions of it, I believe that arrangements should be made to give a summary presentation at the general session of the interim meetings of the American Medical Association. At about the same time I believe that a summary report should be published preferably in the Journal of the AMA. This summary type of report would not interfere in the least with the detailed publication of the work in sections. I believe that the AMA is a better place for this material than the North American Radiological.

I will be glad to help in any way that I can, especially to the extent of making contact with the program chairman of the interim meetings. I am sending a copy of this to Chuck and hope that the work on the report can be keyed to this time schedule.

Sincerely yours,

GVL:gd
