PROPOSED DOE/TTPI AGREEMENT ON RONGELAP/UTIRIK

In response to Dr. Burr's July 11, 1978 telecommunications to Robert Taft, copy enclosed, we enclose as Tab A for your review a draft Interagency Agreement which might serve as the basis to replace Agreement E(29-7)3159 which expires on September 30, 1978. This is PASO's proposal based on information gathered from key TTPI personnel during two separate trips to Majuro and Ebeye. We also enclose as Tab B, a comparison listing the key differences between this draft and existing Agreement E(29-7)3159. Perhaps these can be used as a departure point for discussions on this matter during the October 3 meeting in Washington with Dr. Weyzen, Dr. Conard, Roger Ray and staff personnel.

We wish to point out that this draft has not yet had the benefit of a full NV review primarily because of the short time remaining before the October 3 meeting. Therefore, NV addressees are invited to submit their comments to PASO before the October 3 meeting.

It is appropriate at this time to raise an issue brought up by the attorney for the Rongelap people, but not addressed in the draft for obvious reasons. They feel that any new agreement should include medical coverage for all persons from Rongelap and Utirik with thyroid abnormalities. The basis for this request is the contention that it is difficult if not impossible to convince non-exposed or control group persons that their thyroid problem is somehow different from the others.

I expect to have Harry Brown represent PASO at the October meeting to provide a first hand account of the events which led to the enclosed draft.

Sincerely,

Original Signed By
W. J. Stanley
