Dr. Stafford L. Warren
University of California Medical Center
Los Angeles 24, California

Dear Doctor Warren:

We are writing you at the suggestion of Colonel Sven Bache, AFSWP, because we understand that you were head of radiological safety in connection with the atomic bomb tests known as Crossroads Operation 1946.

We have under consideration the claim of a _____, Washington, D.C., who alleges among other factors that exposure to atomic radiation while employed as an electronic engineer at the Naval Research Laboratory is the cause of his disability. It appears on the basis of somewhat limited information available that _____ has an organic brain syndrome, possibly Alzheimer's Disease. The patient is currently undergoing comprehensive inpatient evaluation at one of the U. S. Public Health Service Hospitals.

In the Able and Baker tests _____ was assigned to the USS Avery Island -- Electronics Coordinating Office, Code 965. It would appear that in some of his duties was obliged to board target vessels after clearance to check on the degree of damage sustained by instruments in the radio shacks.

We had assumed that all personnel wore film badges or dosimeters of some type as there was a potentiality that they would be significantly exposed. The Navy apparently has no retained records showing whether or not this civilian was wearing a film badge. We have come up with negative results to date from Colonel Bache's office. For this reason would you furnish us in general terms a statement relating to the radiation exposures of this claimant on Crossroads Operations? We have been given to understand that no individual participating in the operation had an exposure exceeding 0.1 Roentgen per day.

Your comments on this problem would be appreciated, including citations which present a fuller discussion of this radiological safety problem.

Very truly yours,

/s/

Ralph B. Snavely, M.D.
Medical Director
