Subj: Second medical resurvey of Marshallese; plans for

Ref: (a) USNRDL ltr Ser 3-920 of 11 Oct 1954

1. It is planned that the second medical resurvey of the Marshallese will be conducted during March 1955 with Dr. E. P. Cronkite in charge.

2. For planning purposes please identify the three hematological technicians to be furnished by NRDL when they are so designated. It is assumed that LT E. D. Griffin, MC, USN will participate and it is hoped that the services of Mr. William Murray can be made available for photography. On the recent resurvey his work was of the highest caliber in the difficult field of color photography of the skin.

3. Suggestions as to conduct of this study will be welcomed. As plans progress it is suggested that liaison be maintained at the working level between CDR R. A. Conard, MC, USN who is handling arrangements in this Institute for the resurvey and the scientist so designated in NRDL.
