 Enewetak, Marshall Islands

SUPPORT FOR DOE/LLL GARDEN PROJECT AT ENJEBI

Dear Colonel Mixan:

Lawrence Livermore Laboratory personnel are now scheduled to arrive at Enewetak on November 30, 1977, to continue their work on the garden project at Enjebi. As you are aware this project is not directly a part of the overall Enewetak Cleanup Project; however, it is certainly an important part of determining the future use of the Atoll by the dri-Enewetak. The garden project has previously been coordinated in detail with FCDNA and supported by base resources to the extent possible.

A detailed operations plan will be prepared for this LLL trip; however, we wish to give you as much advance notice as possible regarding support requirements. Following is a listing of pertinent information and support required:

1. Four LLL personnel are scheduled to arrive at Enewetak from Kwajalein on November 30. LLL personnel will be staying in the trailer at Enjebi; however, since all of their equipment was taken out of the trailer and stored at Enewetak they will need to spend two days on Enewetak to get their gear together for shipping to Enjebi. Lodging will be required for four personnel on the nights of November 30 and December 1.
2. Two additional LLL personnel will arrive on either December 2 or December 6. They will not require lodging on their arrival as they can go directly to the Enjebi trailer.
3. Lodging will be required for the above six personnel on the night of December 13 prior to their departure on December 14.

SURNAME ▶	Miller/jhf <i>jm</i>	Brown <i>hbk</i>	Stanley <i>Stanley</i>			
DATE ▶	11/11/77					

4. The following M-boat transportation and supplies will be required:

- a. One trip to Enjebi on November 30 or a few days prior to transport the LLL water tank truck with a full load of water, diesel fuel tanker to fill the 500 gal., tank and 200 gals., of gasoline in drums.
- b. Two trips to Enjebi on December 1 and December 2 (one trip/day) to transport the following LLL equipment:

Backhoe (Track vehicle)
Multi-hoe
2 - Dump trucks
3 - 4 x 4 1-1/4 Ton trucks
Food supplies for seven people for two weeks

If the above equipment cannot be hauled on two trips a third trip will be required.

- c. An additional M-boat trip may be required at some point during the two weeks for re-supply of food, fuel, or water.

As you are aware nearly all of the DOE/LLL equipment has been used in general support of the Clean-Up Project. It is requested that the above listed equipment be checked out, and repaired if necessary, so that it is in good operating condition. Also we understand the LLL "mules" were used and must be repaired.

The above support requirements were discussed with you by Jim Miller and Harry Brown during their recent trip to Enewetak. It is our understanding that the above support can be provided; however, we do appreciate the boat transportation situation at Enewetak. We realize that due to weather conditions or serious mechanical problems it may not be possible to furnish the boat transportation at exactly the times requested. We do wish to emphasize, however, that the LLL personnel are limited on the length of time they can spend at Enewetak and any delay in boat transportation will have a serious impact on accomplishing their program objectives.

An entry clearance request message has been submitted providing the names and other pertinent information on the LLL personnel. Also, as mentioned above a detailed operations plan will be issued. Your continued support for this DOE/LLL project is very much appreciated.

Sincerely,
Original Signed By
W. J. STANLEY
