**Sandia National Laboratories – Albuquerque**  
**2009 Illness and Injury Surveillance Report**

**At A Glance**

The size of the work force at Sandia National Laboratories – Albuquerque (SNL) decreased from 7,758 workers in 2008 to 7,523 workers in 2009, a 3 percent decrease. The mean age for men and women was 46 years; this has remained unchanged since 2007. The largest occupational group among men and women was Professional workers, 56 percent and 46 percent respectively.

SNL reported 239 absences among 2,438 women, an absence rate of 9.8 per 100 women ( $239/2,438$ ). Among the 5,085 men, 251 absences resulted in an absence rate of 4.9 per 100 men ( $251/5,085$ ). Absence rates for 2009 continued the decline that began in 2005 for both men and women.

The highest absence rates were noted in the Security and Fire job category for women (40 per 100 women) and the Crafts group for men (11.9 per 100 men). This is the second year since 2003 that female Security and Fire workers have had the highest rate. Men in the Crafts job category have had the highest absence rates for most of the years since 2003.

Women lost 5,371 calendar days due to illness and injury, a 13 percent increase from 2008. Musculoskeletal conditions (21 percent), respiratory conditions (21 percent), and digestive disorders (8 percent) accounted for 50 percent of all reported diagnoses among women.

Men lost 4,009 calendar days due to illness and injury, a 25 percent decrease from 2008. Fifty-eight percent of all reported diagnoses among men were due to musculoskeletal conditions (21 percent), respiratory conditions (22 percent), and injuries (14 percent).

Of 6 possible sentinel health events for occupations (SHEO), 5 diagnoses were carpal tunnel syndrome, reported by workers in the Professional, Administrative Support, and Technical Support groups. All carpal tunnel diagnoses were reported by workers aged 50 years or older.

The rate of OSHA-recordable health events was 2 events per 100 workers for women and 1 event per 100 workers for men, the same rates seen in 2008. The overall SNL OSHA-recordable event rates have been declining since 2003, similar to the decline in rates we have seen among other DOE sites participating in the IISP from 1999 to 2008. The SNL OSHA-recordable rates were highest among male and female Security and Fire workers.

The number of OSHA-recordable events reported by men has declined 66 percent from the high of 143 events reported in 2003. Among women, the number of events has declined 40 percent from 95 events reported in 2004 (the largest number of events reported by women since 2003).

Even though women only accounted for 32 percent of the SNL work force in 2009, this year marked the first time that women reported more OSHA events than men (57 events versus 49 events) since the beginning of the period in 2003. Among the sites participating in IISP in 2009, SNL is the only site where the number of OSHA events was greater among women than men.

Although 38 percent of the female work force at SNL were Administrative Support workers, they accounted for 60 percent of all OSHA events among women at SNL in 2009. The majority of these events resulted from overexertion and strenuous movements with falls the next most common type of accident.

Since 2003, the number of OSHA-recordable diagnoses has decreased 49 percent, mainly due to an almost 6-fold decrease in musculoskeletal disorders. From 2008 to 2009, the overall number of OSHA-recordable diagnoses decreased 13 percent; musculoskeletal diagnoses declined 38 percent, while the number of injury diagnoses remained the same as in 2008. Fewer unspecified injuries were reported in 2009 compared with 2008. The majority of accidents were due to overexertion/strenuous movements in 2009.

## Sentinel Health Events for Occupations (SHEOs)

An occupational sentinel health event (SHEO) is a disease, disability, or death that is likely to be occupationally related. Although sentinel health events may indicate an occupational exposure, many may result from nonoccupational exposures. Sentinel health events are therefore assessed in two categories:

*Definite Sentinel Health Events:* Diseases that are unlikely to occur in the absence of an occupational exposure (e.g., asbestosis).

*Possible Sentinel Health Events:* Diseases that may be occupational but can also occur in the absence of an occupational exposure (e.g., lung cancer or carpal tunnel syndrome).

**Figure 16. Characteristics of SHEOs by Gender**

	Total Number of SHEO Diagnoses		Total Number of Days Absent	
	Men	Women	Men	Women
Definite	0	0	0	0
Possible	3	3	25	50
