

**Subject:** Doe Conference

I would be willing to present at the DOE conference the following

An overview of the conversion of 170 wet pipe sprinkler systems to dry systems. These system were converted during a 15 month period are the Portsmouth Diffusion Plant. All the systems were safety significant.

Discussion will include the design requirements, the construction process and the impacts on Fire Services operations.

Current information about a system that failed to trip and the manufactures and contractors actions will also be presented.

Let me know if you wish to discuss further or need additional information.
