

ATTACHMENT 1

CONSTRUCTION WASTE MANAGEMENT PLAN ANNOTATED OUTLINE

The intent of this annotated outline is to provide a standardized format for preparation of the Construction Waste Management Plan. The individual Plan elements identified below are intended to be concise and brief. However, the size of the project and complexity of the waste management activities will dictate the level of detail to be provided in the Plan.

- 1.0 **Introduction:** This section describes the intent and goals of the waste management plan to be implemented for the project. This section also identifies the project team members required to comply with the waste management plan.
- 2.0 **Responsibilities:** This section identifies the project team members responsible for implementing the construction waste management plan as well and their responsibilities.
- 3.0 **Waste Minimization/Avoidance:** This section describes measures to minimize and/or avoid waste generation during the project.
- 4.0 **Analysis of Waste Materials:** This section presents the estimation of waste material types and amounts to be generated, disposed, and diverted from disposal during the project. This information shall be summarized in table form as provided in Attachment C of this Section.
- 5.0 **Waste Material Disposition:** This section describes the disposition for each waste material type generated (i.e., recycle, reuse, salvage, dispose) including material handling and collection procedures, transportation methods and requirements, and final destination facilities. This information shall include a summary table as provided in Attachment D of this Section.
- 6.0 **Regulatory Compliance:** This section describes how the construction waste management activities comply with applicable Federal, State, and Local regulations and requirements.
- 7.0 **Meetings:** This section identifies and describes the construction waste management meetings to be conducted during the project and the attendee requirements.
- 8.0 **Documentation/Recordkeeping:** This section describes the recordkeeping methods employed for tracking waste generated by the project. This includes and maintaining records such as manifests, receipts, weight tickets, recycling certifications, and other pertinent records.
